Recommendations

5.1 Immediate Remediation Actions

5.2 Long-Term Mitigation

Conclusion

Appendix: Additional Data

1. Executive Summary

Overview:

This report presents a comprehensive technical analysis of three domains 17ebook.com, aladel.net, and clicnews.com. The tool was used to scan these domains for potential malicious behavior, associated indicators of compromise (IOCs), reputation scores, and associated threats. VirusTotal's robust platform enabled the detection of threats such as malware, phishing indicators, and blacklisted status, providing critical insights into the domains' security posture.

Key Findings:

17ebook.com : Detected as potentially malicious with a low reputation score.

Associated with suspicious redirects and blacklisted IPs. File name: 17ebook.com

- Community score: 12/94
- Creation date: 10 years ago
- Registrar: PDR Ltd. d/b/a PublicDomainRegistry.com
- Detection: malicious

aladel.net: Identified as a potential malware distribution site, with sandbox analysis revealing attempts to download executable files linked to known malware families.

- File name: aladel.net
- Community score: 9/94
- Creation date: 10 years ago
- Registrar: Pacific Domains LLC
- Detection: malicious

clicnews.com : Flagged for potential phishing activity, with connections to known malicious domains and C2 servers.

- Community score: 1/94
- Creation date: 14 years ago
- Registrar: Megazone Corp., dba HOSTING.KR
- Detection: malicious

Background and Objectives

Project Context

The project aimed to evaluate the security risks associated with the specified domains to identify any malicious activities that could compromise user data or system integrity. VirusTotal was employed as a tool to analyze the domains' behavior, reputation, and potential threats.

Objective of the Tool Use:

The primary objective was to leverage VirusTotal's capabilities to:

- Scan the domains for potential malicious behavior and reputation scores.

- Observe dynamic execution and behavioral indicators via sandboxing.
- Analyze domain associations with malware, phishing, or other cyber threats using threat intelligence

Methodology

3.1 Tool Configuration

VirusTotal Configuration

Environment Setup: Configured VirusTotal to scan URLs directly via its web interface and API. Sandbox analysis was enabled using a Windows 10 environment to simulate typical user interactions.

Setup Steps:

- Navigated to VirusTotal's URL scanning interface.
- Entered each domain URL for analysis.
- Reviewed results, including reputation scores, IP resolutions, and related domains.
- Accessed VirusTotal Graph to explore correlations with known threat actors or campaigns.

3.2 Execution Process

Each domain was analyzed using the following steps:

- Conducted URL scanning to detect malicious behavior and reputation scores.
- Reviewed threat intelligence data for associations with malware, phishing, or other threats.
- Observed dynamic execution in the sandbox environment to capture behavioral indicators.

3.3 Monitoring and Analysis

System Monitoring:

- Captured IOCs such as file hashes, IP addresses, and URLs.
- Example: 17ebook.com triggered a pop-up script flagged as phishing-related by VirusTotal's behavioral analysis

Network Monitoring:

- Analyzed IP resolutions, redirects, and related domains.
- Example: clicnews.com resolved to an IP previously associated with phishing infrastructure, as identified by VirusTotal's threat intelligence.

Findings and Analysis

4.1 Indicators of Compromise (IOCs)

Detected IOCs

17ebook.com:

Reputation Score: High indication of phishing or malware hosting.(-288)

Associated IP Addresses: 208.91.196.152

Status code: 200

Related Domains: <https://17ebook.com/>

Malicious Hashes:

4.2 Behavioral Analysis

Malware Actions

17ebook.com:

- Attempted to redirect users to malicious sites and hosted phishing content.
- Associated with suspicious JavaScript execution.

aladel.net:

- Engaged in malware distribution and phishing attempts.
- attempted to establish a connection to a command-and-control (C2) server at 192.168.1.100.

clicnews.com:

- No direct malicious payloads were executed
- Hosted suspicious content and attempted to redirect users to known malicious sites.

4.3 Risk and Impact Assessment

Potential Impact

17ebook.com: High risk of data theft and user compromise through phishing.

aladel.net: Significant risk of malware infection and system compromise with the potential for data exfiltration, system compromise, or lateral movement within the network.

clicnews.com: Lower immediate risk but could serve as an entry point for adware or further phishing attempts.

Persistence Mechanisms:

aladel.net:

The downloaded executable modified registry keys

(e.g., HKCU\Software\Microsoft\Windows\CurrentVersion\Run) to ensure persistence.

No persistence mechanisms were observed for 17ebook.com or clicnews.com

clicnews.com: Moderate risk of phishing and potential malware distribution.

Recommendations

5.1 Immediate Remediation Actions

- Block Access: Immediately block access to the identified malicious domains to prevent user exposure.
- Network Isolation: Implement firewall rules to block outbound traffic to associated malicious IP addresses.
- User Alerts: Notify employees about the phishing risks associated with clicnews.com.

5.2 Long-Term Mitigation

Security Measures:

- Enhance endpoint protection and user awareness training to prevent similar attacks in the future.

- DNS Filtering: Implement DNS filtering to block access to malicious domains
- Endpoint Protection: Deploy advanced EDR tools to detect and prevent similar threats

Monitoring and Detection Enhancements:

Configure security systems to generate alerts for unusual outbound traffic or attempts to access known malicious domains.

Conclusion

Summary of Findings

VirusTotal successfully identified significant threats associated with the domains 17ebook.com, aladel.net, and clicnews.com. These domains were flagged for phishing, malware hosting, and suspicious behavior, posing risks to user data and system integrity.

Next Steps

Immediate actions should focus on blocking access to the malicious domains and isolating affected systems. Long-term measures should include enhancing endpoint protection and improving network monitoring capabilities to prevent future incidents.
